## INTRODUCTION

Lack of definite and timely information with regard to important phases of the production and marketing of California grapes probably is responsible for many of the ills with which the industry is now afflicted. During the 1927 shipping season it became possible, through the cooperation of the California Vineyardists Association, for the United States Department of Agriculture to obtain and assemble certain information not previously available. This information includes daily interstate shipments by varieties, the points at which they were loaded, and their primary destinations; daily unloads by classes (table grapes, black juice grapes, and white juice grapes) in 29 markets, and other similar data. Naturally the data for one year are not conclusive. Further, the methods employed in gathering the data and the character of the available records resulted in certain minor errors. The figures are sufficiently accurate, however, to reveal many interesting and hitherto unknown facts. As timeliness is essential to their best use they are herein set before the industry and the public, together with other data on such subjects as shipments, receipts, production, and prices, as forming the most complete picture of the industry yet presented.

## GENERAL SURVEY OF INDUSTRY

Among fruits and vegetables grapes ranked fifth in farm value in 1927, and were exceeded only by potatoes, apples, oranges, and sweet potatoes. The mere statement that California is the leading grape-producing State in the Union is not emphatic enough. Either the

northern or central producing district of the State produces and ships more grapes each year than all of the other 47 States combined. The season for grapes in California is a long one. Shipments in car lots usually begin from the Imperial Valley about the middle of June; active movement from central and southern California begins in July; and the northern district becomes important in August. Most of the California crop is marketed by the end of November, but certain varieties, such as the sawdust-packed Emperor, move to consuming centers as late as December and January. The main crop, around 70,000 to 75,000 carloads, is rolled during September and October. This movement is now about three times as heavy as it was 10 years ago, although production has only slightly more than doubled during this period.

This enormous crop (estimated to be 2,364,000 tons in 1927) must necessarily be marketed within a short period of time. The satisfactory distribution of fresh grapes and the utilization of many thousands of tons by drying and other processing is one of the greatest problems confronting the entire fruit industry to-day. It is a complex problem of vital importance to California. The entire economic chain, from the producer to the consumer, is affected. It is a problem which will be satisfactorily solved only by sincere, practical, and concerted efforts on the part of all concerned. Certainly one of California's greatest agricultural industries will not realize maximum returns until the individualistic attitude of many is discarded. Even then only one step will have been taken toward their attainment.

## GROWTH OF INDUSTRY

A detailed narration of the history of the California grape industry is not here attempted. Its growth has been phenomenal, but the greatest growth has occurred since the World War. Between 1919 and 1924 grape plantings within the State increased 60 per cent. The estimated total number of vines in the United States at the end of that period amounted to 381,000,000. Of that total, California was credited with almost 75 per cent. In 1926 the agricultural statistician for California estimated that there were 157,000 acres of wine grapes of bearing age and about 17,500 acres not yet in bearing within the borders of the State. The bearing acreage of table varieties was around 144,000 acres, with about 7,000 listed as nonbearing. There were 352,000 acres of raisin grapes in bearing and approximately 3,000 acres not yet of bearing age.

Recent plantings have been relatively light, and an increase of only 9,000 acres of bearing vines was forecast for 1927, and an additional 2,000 acres for 1928. The bearing acreage of raisin grapes is expected to decrease somewhat annually; table varieties will probably show a slight gain; wine grapes of bearing age may add 8 per cent (or a total of about 13,000 acres) in 1928.

## PRINCIPAL VARIETIES [1]

The principal wine-grape varieties, in the approximate order of their relative importance, are Zinfandel, Alicante Bouschet, Carignane, Mission, Mataro, and Petit Syrah. The most important table

[1] The variety names in this bulletin are those commonly used in the "trade"—Thompson Seedless or Thompson for Sultanina, and Tokay for Flame Tokay. Muscat includes several varieties of the muscat type, but in the main refers to Muscat of Alexandria.

varieties are Malaga, Flame Tokay, and Emperor. The outstanding raisin types and variety are muscat and Sultanina (Thompson Seedless). Of the shipments of fresh muscat and Malaga, however, most of the former and many of the latter are for juice purposes. For a detailed statement of the shipments of 1927, attention is directed to the tabulations beginning on page 7.

### PRODUCING DISTRICTS

California has been logically divided into four separate grape-producing districts: (1) The Imperial Valley, (2) southern district, (3) central district, and (4) northern district. The Imperial Valley district is in the extreme southeast portion of the State. The central district is bounded on the south by the Tehacapi (a rugged mountain barrier along the approximate northern boundaries of Santa Barbara, Ventura, Los Angeles, and San Bernardino counties); it is bounded on the north by an imaginary line extending from San Francisco, through Stockton, to Lake Tahoe. The other two districts are obviously located in the areas not already described.

### BRIEF REVIEW OF 1927 SEASON

From the viewpoint of the country at large, the 1927 grape season was marked by later shipments than that of 1926, by lighter production in the East and middle West, and by heavier production in California. The estimated production of the United States during that season was placed at 2,464,712 tons. Of this quantity, California showed a total of 2,264,000 tons; New York, 51,520 tons; Pennsylvania, 14,850 tons; Michigan, 51,700 tons; Missouri, 7,000 tons; and Arkansas, 3,000 tons.

California began shipping about two or three weeks later in 1927 than in 1926. The first car lots of Thompson Seedless were rolled out of Fresno County during the week ended July 23. Practically all varieties set well and generally good weather prevailed during the growing season.

A stable market, higher prices, and light shipments featured the opening weeks of the harvest. By August 6, slightly less than 1,300 cars had been rolled toward eastern markets as against 3,200 on the corresponding date in 1926. The average prices received on eastern auctions during the week ended on this date, compared with the prices received during the corresponding week in the previous year, were as follows: Thompson Seedless in crates, $2.51 and $1.09; Thompson Seedless in lugs, $2.21 and 97 cents; Malaga in crates, $2.61 and $1.16; Malaga in lugs, $2.47 and $1.10, respectively. These figures show that the designated shipments were only about 40 per cent as large as those during the same period in 1926, whereas prices were approximately two and one-half times as great. Probable reasons for this condition were: The later beginning of the shipping season, with the result that eastern markets were more ready to receive the fruit; smaller competition from heavy supplies of other fruits, such as peaches, which occurs during some seasons, and the influence of an organized effort on the part of some growers and shippers toward the bettering of their pack. Much still remains to be done toward the betterment and standardizing of the California pack.

On August 20, Malaga were still bringing higher prices (in crates) than in lugs and higher than either pack of seedless. Seedless were still holding up fairly well, but all table varieties were beginning to show noticeable declines. An attempt was made during the last week in August to strengthen the market on these varieties by a temporary curtailment of shipments. Some results were accomplished and although they were not entirely up to the expectations of all concerned, it can be said that the month of August closed with price averages higher than they had been during that month in the past three seasons.

With the beginning of the juice-crop harvest, during the early part of September, shipments showed a rapid increase. From 2,650 cars during the opening week of the month, the output increased to 9,677 cars during the week ended September 24 (the peak week of the season). The seven-day period of heaviest shipments came between September 28 and October 4, when 10,047 cars were rolled.

One important feature regarding the shipments of the 1927 season is the fact that the previous record daily movement of 1,666 cars, established on September 26, 1926, was broken on each of the following days: September 21, 1,694 cars; September 22, 1,687 cars; September 23, 1,757 cars; September 30, 1,811 cars (new peak record); and October 1, 1,722 cars. Another interesting fact is that although the periods of heaviest daily movement were almost all recorded in September, it remained for October to average over 1,000 cars per day for the entire month, in spite of the car shortage which prevailed in that month.

At the time of the peak movement, around September 24, the carriers were said to have had in excess of 22,000 cars within the borders of the State for use in handling future shipments. The movement continued heavy during the ensuing weeks. By October 10, a slight shortage of cars materialized. Carriers began to apportion car allotments. The shortage continued for two weeks, was alleviated by the natural decline in shipments, and came to an end with the advent of the first fall rains on October 25 which curtailed shipments. Shipments were heavy during the entire period of the shortage. Much has been said as to what shipments "would have been" had the car shortage not materialized but whether they would have been more or less than they turned out to be remains a matter of opinion.

Organized effort on the part of shippers did much, temporarily, to curtail shipments during the period of heavy movement and served to strengthen the market at critical times.

Space will not permit a detailed discussion of the prices received for the various juice varieties on the respective auctions but a tabulation of prices is given on pages 58 to 74.

The f. o. b. market was quiet during the entire season but the amount of cash buying of loaded cars was noticeably heavier than in 1926. No doubt the later season and more optimistic outlook at the beginning of the harvest period were largely responsible for the increased activity. Speculation became most apparent with the coming of the car shortage and the cleaning up of respective varieties. A detailed statement of prices weekly, by varieties, is shown in Tables 21 and 22.

As a whole the 1927 season can be characterized as one with favorable growing weather, earlier maturity and generally good quality of fruit, favorable weather conditions during harvest (with the exception of that of late October and early November), a short and more concentrated shipping period, and generally good markets during most of the season.

### QUALITY OF GRAPES SHIPPED

The quality of the grapes in the 1927 shipments was generally good. Table stock, according to records made in connection with shipping-point inspections graded mostly U. S. No. 1. The percentage of fancy stock was somewhat less than during 1926, which was also true of ungraded shipments. One reason for the fewer "Fancy" shipments is the fact that white varieties did not color so well as in former years, hence many shippers did not make as great an effort to make the Fancy grade as in other seasons. Juice grapes of the black varieties graded about the same as in the previous season, with the exception of Zinfandel, which was poorer. Alicante Bouschet and other blacks averaged very close to the 1926 season's percentages of U. S. No. 1 grades. All other varieties also showed about the same in comparison.

Following the first fall rains, because of hazardous market conditions, many shippers refused to ship stock of low grade. This materially reduced the losses which would otherwise have been sustained toward the end of the season.

### SHIPPING-POINT INSPECTION

Decidedly the majority of the shippers used the Federal-State shipping-point inspection service to some extent during the 1927 season. In practically every instance the few who did not avail themselves of the service were small operators. All of the leading concerns used the service extensively; many of them gave blanket orders for the inspection of all of their juice stock at least.

The record of California grapes inspected shows an increase for every year but one. In 1921, 2,923 cars, or 9 per cent of the 33,343 cars shipped, were inspected. The first big increase occurred in 1923, when 26,445 cars, or 48 per cent of the 55,342 cars shipped, were inspected. A slight decrease occurred in the percentage inspected in 1924, but during the next three years the percentage inspected increased to 47 per cent, 50 per cent, and 52 per cent, respectively. This shows an increase in inspection from 9 per cent of shipments in 1921 to 52 per cent in 1927, during which year the total shipments to November 8 were 70,854 cars.

### EXPLANATION OF CERTAIN VARIATIONS IN SHIPMENT AND PRICE-STATISTICS TABLES

There are certain apparent discrepancies in the tabulations relating to shipments and prices in this circular which may lead to confusion if they are not explained.

The shipment figures may be divided roughly into two groups. The first (represented by Tables 2, 3, 4, 9, 10, 11, 12, 13, and 14) are compiled from reports rendered direct to the Bureau of Agricultural Economics by railroad officials and local agents. They

include both interstate and intrastate movement. The date of movement is synonymous with the date of billing.

The second class of figures (represented in Tables 15, 16, 19, 30, 31, 32, and 33) were compiled from the fruit blocks of the Pacific Fruit Express Co., covering eastbound and northbound movement through Roseville, Sacramento, and Colton, and from train manifests of the Santa Fe Refrigerator Dispatch Co., covering eastbound movement through Barstow. These figures, with a very few exceptions, represent interstate movement only. If dates of movement are given, they represent the date on which cars passed through Sacramento, Roseville, Bakersfield, Colton, and San Bernardino.

From this explanation it will be seen that the two classes of figures will differ. (1) They will differ in total volume for the season or for that portion of the season covered. (2) The shipping records for any day or short period will not agree. Variation between county and station totals, as shown in Tables 13, 14, and 19, is explained by the fact that in Tables 13 and 14 only billing points are shown, whereas in Table 19 shipments are segregated by loading points. In numerous cases the loading point is in one county and the billing point is in another. It should be noted also that the figures in Table 19 cover only the season beginning August 1, whereas figures in Tables 13 and 14 cover the entire shipping season. The fact that the figures in Tables 13 and 14 cover both interstate and intrastate movement, whereas the figures in Table 19 are largely confined to interstate movement, accounts for some of the differences.

Tables 15, 16, and 19, are based upon the movement through California gateways for the season beginning August 1. Differences in the totals for individual varieties in these tables are due to different methods employed in classifying cars of mixed varieties. In working up the figures used in Tables 15 and 16, each car of mixed varieties was designated according to the first variety named, upon the assumption that the variety representing the heaviest portion of the load would be listed first. For the figures in Table 19, if a car contained two varieties each variety was credited with one-half car. If the car contained three varieties each variety was credited with one-third car, etc.

In Tables 30 and 31, showing distribution by classes, the totals for each class differ from the totals shown in Tables 15 and 16. The method of determining the number of cars of each variety passing California gateways, as shown in Tables 15 and 16, has already been explained. In working out the distribution by classes the same records as used for Tables 15 and 16 were used roughly for all of the territory west of the Missouri and Mississippi Rivers. The distribution into other areas, however, particularly the important and highly-populated district north of the Ohio River and east of the Mississippi River, was based upon reports received direct from railroads at Omaha, Kansas City, St. Louis, and Chicago. In making these reports it is evident that certain errors were made in classifying the grapes. These errors have resulted in increasing the number of cars classified as black juice and in decreasing the number of cars classified as white juice and table. As individual cars were not followed through to final destination it was impossible to adjust the differences between those reports and the reports secured from records of the refrigerator-car companies in California.

Tables 21 and 22 cover carload sales f. o. b. California. The prices in Table 21 represent cash sales or purchases by shippers and other operators in the Fresno territory as reported to the bureau market news representative at that point. Prices in Table 22 represent sales made and reported by shipper members of the California Grape Clearing House, an organization composed of members of the California Vineyardists Association. They are grouped according to the date received by the clearing house rather than date of sale. In other words, they lag one to two days behind those in Table 21.

[1] The figures were obtained by applying the percentages of various varieties and classes inspected by the Federal-State inspection service of California to the reported shipments each week. More than half the shipments were inspected by this agency and it is assumed that uninspected cars fairly closely approximate the same ratio as those certified. Slight revisions have been made by comparing the estimates with county horticultural commissioner's records where they were currently available.

TABLE 21.—*Shipping point price ranges*[1] *for California grapes in corresponding weeks, 1924–1927, by pack and variety*

[Basis: Carload, f. o. b., cash on track]

| | 1924 | 1925 | 1926 | 1927 |
|---|---|---|---|---|
| Week ended August | 9 | 8 | 7 | 6 |
| In crates, per crate: | | | | |
| Thompson Seedless | $0.50–$0.75 | $0.60–$0.70 | | $0.80–$0.90 |
| Malaga | 1.00–1.75 | 1.00–1.50 | $0.75–$0.85 | |
| Bulk, including lugs, per ton: | | | | |
| Alicante Bouschet | | | 80.00 | |
| Zinfandel | | | 60.00–65.00 | |
| Week ended August | 16 | 15 | 14 | 13 |
| In crates, per crate: | | | | |
| Thompson Seedless | | .60–.70 | | .70–.85 |
| Malaga | .90–1.35 | .80–1.00 | .70–.90 | 1.10–1.50 |
| Bulk, including lugs, per ton: | | | | |
| Alicante Bouschet | | 90.00–100.00 | 67.50–80.00 | |
| Muscat | | | 35.00 | |
| Thompson Seedless | | | | 35.00 |
| Zinfandel | | 70.00–75.00 | 60.00–65.00 | |
| Week ended August | 23 | 22 | 21 | 20 |
| In crates, per crate: | | | | |
| Thompson Seedless | .60–.75 | .55–.70 | .60–.65 | .60–.80 |
| Malaga | .80–1.25 | .75–.95 | .60–.65 | .90–1.25 |
| Bulk, including lugs, per ton: | | | | |
| Alicante Bouschet | 110.00–120.00 | 90.00–95.00 | 62.50–70.00 | 70.00–75.00 |
| Carignane | | | 65.00 | |
| Muscat | 37.50–42.50 | 32.50 | 32.50–35.00 | |
| Petit Syrah | | | 70.00 | |
| Thompson Seedless | | | | 32.50–35.00 |
| Zinfandel | 75.00–80.00 | 70.00–75.00 | 60.00–65.00 | 60.00–72.50 |
| Week ended August | 30 | 29 | 28 | 27 |
| In crates, per crate: | | | | |
| Thompson Seedless | .60–.70 | .60–.70 | .60–.80 | .60–.85 |
| Malaga | .90–1.25 | .75–.95 | .60–.75 | .75–1.00 |
| Tokay | 1.50–2.00 | | | |
| Bulk, including lugs, per ton: | | | | |
| Alicante Bouschet | 110.00–120.00 | 85.00–95.00 | 65.00–70.00 | 70.00–80.00 |

[1] Weekly averages of daily auction sales, weighted by number of packages reported sold. The daily sales as reported in the bulletins issued by the Fresno, Calif., office of the Bureau of Agricultural Economics are the basis for these computations.

[2] Dates are for Saturdays in 1927. In other years corresponding periods are given. Dates are not shown for those weeks during which no sales were reported.
